

Assessments

Denison Technologies offers power quality, energy and sustainability assessments delivered to major energy consumers such as large commercial and industrial facilities. Assessments identify problems, potential problems and inefficiencies. Our team of experienced engineers provides the experience, common sense, and expertise necessary to provide meaningful and actionable recommendations. We identify issues, focus on priorities and deliver Engineering Reports to improve operations, profits and sustainable outcomes.

Our Process

1. Planning the survey
2. Preparing for the survey
3. Inspecting the site
4. Monitoring the power
5. Analyzing, monitoring, and inspection data
6. Making engineered recommendations, inclusive of ROI impact
