

# Reports

We provide a variety of standards-based reports, briefly described below:

## DIAGNOSTIC REPORTS

A "snapshot," non-intrusive, cost effective, and a quick first step to identify if PQEM events are occurring. Simply upload your data - let's get started!

## ASSESSMENT REPORTS

A more detailed report delivered following a Basic or Comprehensive Assessment. Reports include findings from our engineering team's inspection, results of meetings with key personnel, a review of key documents, and the results of additional measurements.

## MONITORING REPORTS

Monthly power quality and energy reports provided to subscribers of our continuous monitoring service. Monitoring reports outline events captured over a "full duty cycle" month for greater insight and action.

## COMPREHENSIVE REPORTS

Reports delivered after review of a more comprehensive data set obtained during a Professional Services engagement.

## CUSTOM REPORTS

For licensed users of our PQES software, customers can create a host of custom reports, or work with our software specialists who can tailor a report to your needs.
